

# Bridge-type cable tray manufacturing method

## Overview

The manufacturing method of the curved cable tray includes the following steps: determining the outer arc length and the inner arc length of the curved cable tray; providing a plate, and cutting the plate according to the outer arc length and the inner arc length; plasma. The manufacturing method of the curved cable tray includes the following steps: determining the outer arc length and the inner arc length of the curved cable tray; providing a plate, and cutting the plate according to the outer arc length and the inner arc length; plasma. The cable tray production line is an intelligent mechanical integrated system designed for the production of cable tray systems, which realizes the precise forming of the bridge structure through automated processes. Our production line is equipped with intelligent punching, roll forming and. Cable tray manufacturing involves creating trays that are designed to hold, support, and protect electrical cables in various environments. Cable trays are crucial for organizing cables, keeping them safe from physical damage, and ensuring their proper functioning over time. It supports multiple production batches and offers large-scale manufacturing.
