

# Cable tray partition dimensions

## Overview

Standard cable tray widths per IEC 61537 and manufacturers' ranges are typically 50, 75, 100, 150, 200, 225, 300, 400, 450, 500, 600, 750, 900, and 1000mm. In practice, cable tray dimensions are a system of interrelated measurements —width, depth, length, and material thickness—that directly affect cable fill compliance, heat dissipation, structural loading, and long-term expandability. From an engineering standpoint, cable tray dimensions are not. us-trations without notice. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned. The following pages address the 2014 National Electrical Code® requirements for cable tray systems as well as design solutions from practical experience. The information has been organized for use as a reference guide for both those unfamiliar and those experienced with cable tray.
