

Can I run cables after adding a beam splitter

Overview

Q1: Can I use an old coax cable with a new splitter?

You can, but older RG59 cables may have higher signal loss and worse shielding. Q2: Do splitters work for internet and TV together?

Only if the splitter is MoCA-compatible. Before it enters my house, there is a coaxial splitter. Optical cables can be routed from various sources, including first-level optical crossover boxes, second-level optical crossover boxes, or optical fiber splitter boxes. This method suits scenarios with large scale and high user density, such as high-rise residential buildings. For the secondary. Here is an image #1 - It's how I connected everything inside the junction box: <https://imgur>. When I connect the coax directly to the modem, although it's not life changing, it's a significantly noticeable jump from using a splitter (it's a high quality splitter). Connectors/adapters: SC/APC, LC, or F-type connectors, depending on your setup.
