

# Cold joint adhesive

## Overview

Cold Joint Sealant is a single-component material made from a combination of bitumen, special solvents, bitumen rubber, and chemical additives. It has a very high adhesive strength to various surfaces, such as asphalt, concrete, and brick. ColdBond is a next-generation acrylic-based bonding agent designed to provide superior adhesion and flexibility for concrete cold joints, plaster, and gypsum applications. Traditional bonding techniques such as welding use high temperatures generated by an electric arc or the burning of gasses to 'melt' the materials so that they fuse into one. For road repairs, utility reinstatements and patching works, our premium Cold Joint Sealer (CJS) spray creates a strong, waterproof bond between asphalt layers, improving road durability and. Description: The Dura-Fill CJA is a hot-applied modified asphalt adhesive. The Dura-Fill CJA fosters a long lasting seal between two sections of asphaltic pavement.
