

Concealed installation of level 3 distribution box

Overview

Concrete can be used to secure the box in place after installation. When building the wall, the reserved hole shall be about 20mm larger than the length and width of the distribution box. It takes the incoming power and safely distributes it to different circuits throughout your building. For distribution boxes that handle only lighting circuits or small power loads, if the incoming wire size is less than 10 square millimeters and the number of circuit switches is fewer than 20, the width of the box should be calculated by summing the width of the switches and adding an additional. 1. 4 Before the trial operation, the PE row in the cabinet, table, box, and panel should be connected, the specifications and models of the components in the cabinet, table, box, and panel should meet the design requirements, the wiring should be correct and the handover test should be qualified. 4 KV Substation of the ratings indicated above. The body of the boxes shall have sufficient re- enforcement with suitable size of channels keeping a provision for fixin andle conforming to general.
