

# Core Switch Password

## Overview

This article provides instructions on how to define basic password settings, line password, enable password, service password recovery, password complexity rules on the user accounts, and password aging settings on your switch through the Command Line. This article provides instructions on how to define basic password settings, line password, enable password, service password recovery, password complexity rules on the user accounts, and password aging settings on your switch through the Command Line. What Is the Default Username and Password for Cisco Switches?

TL;DR – Quick Answer Most Cisco enterprise switches - including the Catalyst 2960, 9200, 9300, and higher — have no default username or password. You must create login credentials during the first console-based setup. Only the Cisco. The first time that you log in to your switch through the console, you have to use the default username and password, which is cisco. Password complexity is enabled by default. So what should you do if this password is forgotten?

Cisco switches have. Changing the password on your Cisco Switch is a crucial step in maintaining the security of your network. Enter privileged EXEC. CORE SWITCH Urgent ?

you need to have downtime to recover this, so plan for maintenance and do the password recovery from console access, by the way the comment in general, if you tell us the model of the device so assistance can be better.
