

Distribution box cannot be started

Overview

Please try setting it up again by executing `'/sbin/vboxconfig'` as root. If your system has EFI Secure Boot enabled you may also need to sign the kernel modules (`vboxdrv`, `vboxnetflt`, `vboxnetadp`, `vboxpci`) before you can load them. Please see your Linux system's documentation for more. We have covered some common troubleshooting scenarios associated with WSL below, but please consider searching the issues filed in the WSL product repo on GitHub as well. While dragging, use the arrow keys to move the item. 1-2 No response No response I want to use Docker Desktop, but for the past. I have found that this service was disabled before the December update, for some reason it has gone to automatic and cannot be started, maybe this behavior is normal if you are not using this feature. Please enable the "Virtual Machine Platform" optional component and ensure virtualization is enabled in the BIOS.
