

FTTH uses intelligent network patch panels

Overview

Smart patch panels integrate diagnostic capabilities to test the fiber optic link remotely. This enables network administrators to accelerate initial deployment, quickly identify and troubleshoot issues, reduce downtime and increase network efficiency. This complete & intelligent-ready physical layer management system uses RFID technology for wireless detection of individual patch cords & real-time monitoring of unintended physical changes in network infrastructure. Belden offers a variety of software solutions. The software helps with managing. The SYSTIMAX® iPatch® HD & UD fiber panels are a component of the imVision® automated infrastructure management (AIM) solution and provide intelligent connectivity to the data center. Built on world-renowned high-performance SYSTIMAX® copper and fiber connectivity, SYSTIMAX Intelligent. Whether in data centers, FTTH deployments, telecom rooms, or industrial networks, one component quietly plays a critical role in keeping fiber connections organized and manageable: the fiber optic patch panel. Companies that implement Gigabit Ethernet and Fibre Channel networks. The fiber patch panel, also known as an optical distribution frame (ODF), plays a key role in terminating, distributing, and protecting optical fibers.
