

Fiber Optic Cable Testing Temperature Standard

Overview

This document defines a test standard to determine the ability of a cable to withstand the effects of temperature cycling by observing changes in attenuation. See IEC 60794-1-2 for a reference guide to test methods of all types and for general requirements and definitions. Corning recommends that all fiber optic systems be tested to a minimum set. The advanced search enables to find IEC publications by a Discover our powerful search engine and read freely all the variety of criteria (reference number, text, technical publications previews, graphical symbols and the glossary. Published by the International Electrotechnical Commission, it defines the mechanical, environmental, and optical tests that every cable must pass before it can be. Functional Performance Standards for Fiber Optic Products Functional performance defines how well a fiber optic product transmits optical signals. Lower attenuation means less signal loss over distance.
