

# Fiber braided tubing 1000mm deep

## Overview

These tubes are comprised of carbon fiber braid and unidirectional fabrics. This product is ideal for building lightweight frames and structures such as trusses. Round carbon fiber tubes are manufactured by using the pultrusion technique in which the high-performance carbon fibers are all orientated parallel to the longitudinal axis (unidirectional) and internally reinforced with more unidirectional carbon fibers laminated by using pull winding technology. Easy Composites carry one of the largest ranges of carbon fibre tubes available to buy online. Roll-wrapped carbon fibre tubes tend to be the larger diameters and - because of their alternating layers of. High Performance tubes are laminated from high-quality carbon fibres and epoxy (prepreg) and always have an attractive carbon fibre outer layer, finished with a satin PU-coating. Made from high quality aramid fibers, Nomex® fabric hoses offer outstanding mechanical and thermal properties. We have a great online selection at the lowest prices with Fast & Free shipping on many items! Manufactured from high-strength T700+ grade carbon fibers using precision braiding technology, our carbon fiber braided tubes deliver exceptional strength-to-weight ratios and superior environmental resistance.
