

# Five-circuit aviation plug power distribution box

## Overview

The PDU is a dual channel, redundant, EASA CS-LURS Compliant aircraft electrical system in a single box. It embeds Primary and Secondary Power distribution system, plus battery charging and 14V DC/DC converter functionality. The feed thru feature allows multiple boxes to be placed along one feed so that receptacles can be easily placed wherever needed. As a recognized leader in power distribution, AMETEK PDS offers a complete range of COTS and custom AC and DC power distribution solutions designed to solve simple and complex problems for the aerospace & defense industry, and with the expertise to integrate all parts of the generation and. CorePower<sup>®</sup> aircraft power distribution systems from Astronics replace traditional mechanical breaker systems with intelligently controlled solid-state switches to provide next-gen reliability and safety. It just requires few connections to power sources and loads to be ready. Power distribution system in an aircraft is very essential in order for the power available at the appropriate generating sources, to be made available at the inputs of the power-consuming equipment and systems, which depends on the type of aircraft and its electrical system, number of consumers. LPA's aviation products are designed to support the efficiency and safety of the ground handling staff and GPU equipment in use on airport aprons.
