

GPON optical module B has no light

Overview

Possible cause 1: The optical fiber line is not connected properly. Diagnostic method: Confirm. My FTTP was installed last Wednesday and an hour after Openreach left the connection dropped and was left with a Green flashing PON light. BT organised another Openreach installer for Friday, they arrived and it was because the serial number for the ONT wasn't registered correctly to my property. GPON System Optical Parameter Detection provides information about optical parameter diagnosis and the GPON port optical parameter threshold. Diagnostic method: Check the GPIO part according to the development guide and compare the hardware. Symptom: No power indicator light or red blinking light. The problem might be one of the following: Problems will affect all the network users if it occurs in the shared part which includes OLT, feeder fiber, and splitter. An ONU can be managed by the OLT and be configured with services only after going online. You can check whether an ONU goes.
