

# Grounding Standards for Outdoor Network Cabinets

## Overview

Article 250 is a foundational pillar of the NEC; it should be studied in its entirety to make sure that both grounding and bonding are done properly. Poor Quality at Cabinet Manufacturer – Not following designs, making bad part substitution decisions, and lack of training in production. Poor work by Field Technicians – Lack of training or available time causing short cuts during maintenance or add on's. Natural Causes - Weather and Humidity. Bonding configurations, earthing, and the type of power distribution for equipment located at remote electronic sites are proposed, which are intended to promote harmony of installation and equipment configurations while providing for personnel safety and electromagnetic compatibility. Grounding strip and connectors shall be tin-plated. All components shall be bonded to the rails with paint. Because bonding and grounding systems within a building are intended to have one electrical potential, coordination between electrical and telecommunications bonding and grounding systems is essential during design and installation. One way to coordinate these efforts is to follow. IPMENT, STRUCTURES, ETC. IN ELECTRICAL STATIONS INCLUDING TRANSMISSION AND DISTRIBUTION SUBSTAT GR THAN 8 FT FROM THE FENCE. THE FENCE SHALL BE GROUNDED SEPARATELY FROM THE GRID UNLESS OTHERWISE NOTED ON THE A PROPRIATE PROJECT DRAWING. " Bonding metal parts, such as enclosures and raceways, ensures that they are all continuous on an effective ground-fault current path (EGFCP) that references back to ground (earth).
