

High-precision relay protection tester

Overview

A Relay Protection Tester (RPT) is a high-precision, multi-channel, digitally synthesized, and microprocessor-controlled test instrument engineered for the comprehensive functional verification, dynamic performance evaluation, and time-domain accuracy validation of. A Relay Protection Tester (RPT) is a high-precision, multi-channel, digitally synthesized, and microprocessor-controlled test instrument engineered for the comprehensive functional verification, dynamic performance evaluation, and time-domain accuracy validation of. Megger's smart relay testing solutions and expert support help you validate protection performance, improve system reliability, and ensure continuity of power across your network. Ensure protection systems operate correctly Safeguard lives, equipment, and continuity of power by ensuring your. Primary injection testing of protective relay equipment and circuit breakers Simplify all types of switchgear and current transformer commissioning, earth/ground grid, circuit breaker testing. individual tripping schedules for both overcurrent and distance protection in a simple and. The HMDQ HMJBC-802 is a high-performance, high-power, high-precision three-phase microprocessor-based relay protection tester meticulously crafted by Goldhome Hipot. Designed specifically to meet the stringent requirements of modern complex power systems for testing protection devices, it. Compact, powerful relay test systems for carrying out highly complex tests with ease and precision. The test systems of the ARTES product line are used to carry out functional tests on all types of protection devices, including DT/IDMT relays, distance protection relays and differential protection. Our Six Phase Relay Protection Tester is an advanced and versatile tool designed for thorough testing and calibration of protection relays in complex power systems.
