

How to find the IP address of the H3C core switch in the local area network

Overview

To identify the address, log in to the device through the console port, and then execute the display ip interface brief command. The following is the sample output: <Sysname>display ip interface brief *down: administratively down (s): spoofing (l): loopbackIP addressing uses a 32-bit address to identify each host on a network. An example is 01010000100000001000000010000000 in binary. To make IP addresses in 32-bit form easier to read, they are written in dotted decimal notation, each being four octets in length, for example, 10. Enter the following commands to enable Telnet: Define the username and password for Telnet, e., for the "admin" user: Specify Telnet sessions through VLAN 1: Connect to the management. This variant with XML, allowing you to grab the MAC as well as the IP address, and pretty full control over the output: xmlstarlet sel -T -t -m '//host[ports/port/state/@state="open"]' -v 'address[@addrtype="ipv4"]/@addr' -o ' + ' -v 'address[@addrtype="mac"]/@addr' -o ' + ' -v. without warranty of any kind, express or implied. H3C shall not be liable for technical software features available on the Web interface. Each IP. Chapter 1 IP Address Configuration Commands.
