

Industrial Switch Aggregation

Overview

Network Redundancy and Link Aggregation are essential features of managed industrial switches eliminates this single point of failure by providing alternate communication paths that activate automatically when a fault occurs. In industrial automation. The DIN Rail Industrial Network Switch is a rugged, space-saving Ethernet switch designed for reliable operation in harsh industrial environments. It provides stable and efficient data transmission for industrial automation, surveillance, and control systems. This technology not only increases the total bandwidth available but also provides redundancy in the event of a physical link failure, thereby ensuring stable and continuous data. LANCOM aggregation switches enable high-performance and hierarchical switch infrastructures to be set up and serve as the distribution basis for networking subordinate access switches. Equipped with future-proof fiber-optic and multi-Gigabit Ethernet (mGbE) ports as well as high-throughput uplink.
