

Installation distance of distribution boxes and meter boxes

Overview

The distance between the distribution box and the switch box should not exceed 30 meters, and the horizontal distance between the switch box and the fixed electrical equipment it controls should not exceed 3 meters. This proximity principle reduces line losses and improves power. Before installation, it's important to know what makes up a distribution box. Let's break it down into two main parts: the outer shell and the electrical parts inside. That small enclosure becomes a shared responsibility. If the location is wrong, the issue spreads quickly. This construction standard specifies the design of wooden frames for polyester meter boxes intended to be installed recessed into the consumer's wall. A position on the house wall facing the driveway, or within 2m of either corner of this wall is normally acceptable subject to. The bottom edge of the distribution box is usually between 1.
