

Installing a 4-core fiber optic cable for surveillance

Overview

All you need here is a fiber optic cable and connector along with digital converter. High Bandwidth: Fiber optic cables are capable of supporting data speeds up to 10Gbps or beyond and they carry large amounts of data over extended distances without compromising on video. IP cameras that are part of a modern surveillance system are deployed using PoE technology that involves the use of copper based network cabling like CAT5e or CAT6 that has a data transmission limit of 100m (328ft). In a general copper cable network which has a CCTV camera connected to it, the camera signals. Recommendations for Fiber Optic Cable Installation Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth. There are three ways to cable IP surveillance cameras those being UTP (unshielded twisted pair) premises cabling (Cat5e/6), fiber optics, and existing (or new) coax cables.
