

Integrated Fiber Tail Carbon Foot

Overview

This innovative prosthetic solution is engineered using high-strength carbon fiber materials, carefully layered and molded to create a dynamic response system that mimics natural foot movement. WalkOn AFOs are lightweight, low profile, and extremely tough. And their dynamic design provides a more physiological and symmetrical gait, offering fluid. The special properties of carbon fiber enable modern foot constructions with energy-storing spring elements. The various models enable the fitting of different amputation. The Intrepid Dynamic Exoskeletal Orthosis was used in individuals with lower-limb trauma, the Neuro Swing and ToeOff in individuals with neurological disorders, the Chignon in individuals with hemiplegia and stroke, and the WalkOn in people with hemiplegia and cerebral palsy. Each device produced. Check each product page for other buying options. Discover more about the small businesses partnering with Amazon and Amazon's commitment to empowering them. Clinical practice necessitates adjusting the ankle foot orthosis torque to accommodate each patient's unique stride and body function.
