

Introduction to the Features of Sino-European Fireproof Cable Trays

Overview

Fireproof cable trays are an important device used for internal cable wiring in buildings. They have fire-resistant and high-temperature resistant characteristics, effectively preventing the spread of fire and ensuring the safety of buildings and personnel. 7 products are successfully used to protect cables in high-rise buildings, industrial buildings, and offshore facilities as well as in sensitive areas, such as hospitals, airports, production. Basor Electric, sensitive to the need to minimize the consequences of a fire, has subjected its cable trays to rigorous fire resistance tests to ensure the behavior of its products. In the event of a fire, it is necessary to maintain the functionality of certain electrical installations, such as. These are cable management systems composed of trays, mounting support systems, direction changing parts, connection parts and fittings with the purpose of carrying and fixing cables safely in the electrical installations. These products are designed to carry heavier cable loads compared to the.
