

Is the cable fiber optic cable or electrical wire

Overview

A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an electrical cable but containing one or more optical fibers that are used to carry light. A TOSLINK optical fiber cable with a clear jacket. These cables are used mainly for digital audio connections between devices. Whether you're looking at an HDMI cable, a USB cable, Ethernet patch cable, or any other kind of network of data transmission cabling, they are all built using copper or fiber optic internal wiring. The difference between wire and cable In fact, there is no strict boundary between "wire" and "cable". Generally, the products with a small number of cores, small product diameter and simple structure are called wires, those without insulation are called bare wires, and others are called cables. In addition, there are components such as water blocking materials.
