

# Is the fireproof cable tray galvanized

## Overview

The fireproof channel cable tray system is produced by galvanized channel cable tray after processing surface treatment of a layer of fireproof coating. Selecting the appropriate fire protection system for fire resistant cable trays in high-stakes projects—especially in regions like the Middle East with extreme climates and frequent potential for explosive atmospheres—is a critical decision impacting safety, compliance, and lifecycle cost. This document outlines the key requirements for cable tray layout, installation, and fireproofing in industrial and commercial environments. Route Planning and Layout Principles Coordinate with Building Structure: Cable tray routing should align with architectural design, avoiding unnecessary. NewReach has created a fire-rated cable tray designed to maintain its structure during a fire. This tray effectively prevents the spread of flames for a specified duration. NewReach specializes in fire-rated cable trays; however, as an alternative DIN 4102-12 can be used. In addition, the use of high environmental protection pigment makes the fireproof coating on the cable tray non-toxic, with no pollution, and has. Cablofil cable tray is the preferred choice for the cable containment of low and high voltage electric cables where fire resistance is crucial - this includes cable basket tray systems for Prysmian FP (FP400 and FP600) and Draka Firetuf type cables.
