

Ivory Coast Solution ONT Optical Network Terminal SFP

Overview

5 Optical Network Terminal (ONT) with Small Form-factor Pluggable (SFP) packaging. The module integrates a bi-directional optical transceiver function and GPON MAC function. PON technologies, unlike Ethernet, are not P2P but one-to-many with two device types: ONU (Optical Network Unit)/ONT (Optical Network Terminal) and OLT (Optical Line Terminal). Both devices can be manufactured using the SFP form factor 1. It is a cost-effective GPON customer premises system that provides broadband services with 1244 Mbps upstream and 2488 Mbps downstream by connecting to subscribers' switches or routers. The device. An optical network terminal (ONT) is a device used to “convert” the signals from the fiber network into a technology that end-users can use to connect their devices, like laptops, tablets, smartphones, streaming devices, etc. From my research I've reached the following conclusions: Optimum's fiber access uses the ITU-T G. 984, which is the major technology for.
