

Latvia AI Server 10G

Overview

Finnish technology company DataCrunch Oy, in partnership with the Republic of Latvia, with support from international investors, has submitted a conceptual proposal to the European Commission for the development of an AI GigaFactory in Latvia. This proposal directly supports the European Union's. An AI factory is a type of specialized IT infrastructure that converts an organization's big data into actionable intelligence and practical AI applications. Its basic building blocks are a supercomputing cluster for training AI models and an inference platform capable of supporting the widespread. In June 2025, Poland, together with Latvia, Lithuania, and Estonia, submitted an Expression of Interest to the European Commission for the establishment of the Baltic AI Gigafactory - an ambitious initiative aimed at significantly strengthening the development of artificial intelligence in the. Delska's launch event for its new data centre in Riga received support from the Prime Minister of Latvia, Evika Silina (R) and the Speaker of the Parliament, Daiga Mierina (L). CEO of Delska, Andris Gailitis stands in the centre of the logo. Riga is making a stronger case as the Baltics' response. Atal Networks offers hardware-backed dedicated server pricing in Latvia with no hidden limits and no shared resources. Whether you need a 1Gbps deployment or a 10Gbps high-bandwidth server, every plan includes SLA-backed uptime and enterprise-grade infrastructure in Riga.
