

# Lifespan of Fiber Optic Cable Patch Cords

## Overview

Theoretical Lifespan: 30 to 50 Years. In a perfect vacuum, the silica glass (SiO<sub>2</sub>) core does not degrade. Manufacturers like Wolontek design cables to remain within attenuation specs for this period. Users should familiarize themselves with these warranty terms, as they often provide guidelines on the expected lifespan of the cords. If the cords are approaching the end of their warranty period and showing signs of wear, it's wise to consider replacing them proactively. Finally, conducting a. Fiber optic cables are a critical component in modern networks, with their performance directly affecting the stability of data centers and enterprise networks. But ask any veteran network engineer, and they will tell you a different story. Le acrylate coating The 250 µm primary coating surrounding the silica is more sensitive: when exposed to UV radiation, humidity, or extreme temperatures, it can become brittle over 10 to 20 years.
