

# Mali Low-Voltage Integrated Distribution Box

## Overview

It is a new type of prefabricated substation developed for the special usage requirements of wind power generation, featuring strong integration, easy installation, short construction period, low operating costs, high structural strength, and strong corrosion resistance. The YBF series wind power box-type substation products are specially designed and developed by our company for wind power generation. 69KV electric energy generated by the wind turbine to 35kV, and then transmit it to the wind farm. Our intelligent and mechanical boxes in the area of power and data distribution offer modular solutions for all voltage levels and at the same time optimize functionality - for maximum efficiency with maximum safety. It provides real-time monitoring and analysis for distribution transformer operation data and a fault protection system in order to prevent transformer. Dongfeng-covering various types of distribution boxes\_rich and diverse product system, covering various types of distribution boxes and cabinet products. Data for medium and high voltage transmission lines in Mali. A Low Voltage (LV) Distribution Box, also commonly known as a Distribution Board (DB), panelboard, consumer unit, or fuse box, is an electrical enclosure that serves as the central point for distributing and protecting the final circuits within a building. It takes one large incoming electrical.
