

ODF cabinet fiber optic interface

Overview

The ODF (Optical Distribution Frame) Cabinet is a highly efficient, flexible solution designed to facilitate the management and distribution of fiber optic cables. They protect connections with a lockable DCX CABINET 10-HOUSING 84x36x15, LEFT-RIGHT. Network managers need a better solution, one that supports rapid deployment, plug-and-play connectivity and high density—all while maximizing the usable density and long-term value of the fiber network. It ensures fiber management is structured, minimizes signal loss, and provides accessibility for maintenance and future expansion. They enable the integration of cable connections with other components of optical fibre infrastructure. Usually mounted in 19' racks or cabinets. Available in different types and designs depending on the number of fibers to be installed and requirements on design and safety. Could be customized with pre-installed.
