

ODM Optical Transceiver Module OSFP

Overview

OSFP (Octal Small Form Factor Pluggable) is a pluggable optical transceiver interface standard that supports eight electrical lanes (Tx/Rx) per module. Each lane can operate up to 100G PAM4, allowing total bandwidths of 400G or 800G depending on configuration. As data center bandwidth demands skyrocket, Fibrecross delivers industry-leading 400G optical transceiver modules—engineered for ultra-low latency, minimal power consumption, and rock-solid reliability. Operating with an eight-lane electrical interface where each lane delivers 50Gbps via PAM4 (Pulse. This specification defines the electrical connectors, electrical signals and power supplies, mechanical and thermal requirements of the OSFP Module, connector and cage systems. The OSFP Management interface is described in a separate document, Common Management Interface Specification for 8/16X. The OSFP form factor has emerged as the leading solution for next-generation deployments, but timing the transition matters. This guide gives you the complete picture. Within the first few centimeters of its optical engine, the TS-OP-318H-01C.
