

Power Redundancy Module for Distribution Cabinet

Overview

Install a redundancy module (also called a diode ORing module or MOSFET-based redundancy module) between the outputs of the two power supplies and the load. In combination with the new QUINT POWER power supplies, your system is monitored continuously. The modules secure highest reliability and availability in 1+1 and n+1 redundant systems. We also offer modules. See Call station interface (redundant) PTO2009 A ground fault monitor PCA2001-A1 must be used when the PT2001-A1 is powered from a cabinet with a DC/ DC converter PCA2011-A1 or PCA2018-A1. If the DC 24 V is used for other external components, a separate fuse holder with a 1 A fuse is required for. The HollySys SM941 DC Power Redundancy Distribution Module is a robust and reliable solution designed to enhance system reliability through dual-channel redundancy, ensuring continuous operation even in the event of a failure. This module is specifically engineered for industrial control systems. At an average estimated cost of nearly \$9,000 per minute, a single outage is enough to significantly impact a business's bottom line. Data center managers need to take proactive measures that help them mitigate that risk.
