

Recommended Sino-European Foundry Spectrometer

Overview

The SPECTROLAB as well as the SPECTROMAXx can be employed depending on the specialization, the number of casting processes and the semi-finished and finished products being produced. The SPECTROCHECK is generally used by small companies. Introduction: Strategic OES selection delivers sub-30-second melt analysis, optimizing a 10-year TCO by balancing 25% capital against 75% operational costs. The global iron and steel casting industry faces unprecedented demands for precise chemical composition control and energy efficiency. Compared to classical sampling moulds the filling conditions for Heraeus Electro-Nite samplers are always the same. By minimising correction time and maximising throughput, a spectrometer for Steel testing ensures production accuracy while saving. Small footprint system for improved laboratory performance and maximum cost-effectiveness The FoundryLab is the fully-automatic solution for the challenges in quality assessment of foundries. The cost-effective system has a small footprint, significantly increases laboratory throughput and relieves.
