

Selecting a 3G optical module

Overview

Selecting an optical module requires consideration of transmission speed, environment, connector type, fiber type, transmission distance, wavelengths, transceiver type, MSA and IEEE compliance, and vendor support. The optical module serves as a crucial component in optical fiber communication systems, operating at the physical layer, which is the lowest layer in the OSI model. Its primary function is to achieve optoelectronic conversion by converting electrical signals into optical signals and vice versa. Whether you are creating a 100-Gbps or 400-Gbps, small form-factor pluggable (SFP) module, SFP+ transceiver, XFP module, CFP, X2/XENPAK module. In the rapidly evolving world of telecommunications, selecting the right 3G GSM module can significantly impact your project's success. As the communication link, these modules provide fast and reliable connections that are essential to. Optcore OHPC3G-xx10DCR is a high-performance, cost-effective 3G-SDI CWDM optical transceiver module for video transmission applications over single-mode fiber (SMF). It provides the data rates from 50Mbps to 2.
