

# Should outdoor fiber optic cables be connected through conduits

## Overview

Install cables in conduits or use armored sheaths for physical protection. Seal all building entry points to keep out moisture. Work with professionals who know the National Electrical Code and local regulations. Based on installation methods, outdoor fiber optic cables are categorized as follows: Underground fiber cables are generally pulled within a conduit that is buried underground, usually 1 to 2 meters deep, to reduce the possibility of being dug up. My current plan is to run 2" or 3" PVC conduit across the two building (clamped to the underside of a metal stairwell and on each building mount a 10x10 (or whatever size is recommended) PVC box. Indoor fiber optic cable uses tighter buffers and routes through conduits or trays. Conduit provides a. Whether you're setting up a network in your home or installing fiber optic cables for a large-scale project, one crucial factor to consider is the conduit. 2 meters (3-4 feet) deep to reduce the likelihood of accidentally being dug up.
