

Smart Optical Cable Platform

Overview

Smart Optical Line System is a standardized and open intelligent service transmission platform, which meets a variety of service network scenarios such as optical service transmission of access network/metro network/backbone network, high traffic data transmission of data center . Smart Optical Line System is a standardized and open intelligent service transmission platform, which meets a variety of service network scenarios such as optical service transmission of access network/metro network/backbone network, high traffic data transmission of data center . Open line systems supporting IP-over-DWDM built on disaggregated architectures with no hidden license fees, compact form factors, and high energy efficiency. The Dynamic Connectivity Platform (DCP) is designed for building open optical point-to-point or advanced, ROADM-based ring and mesh networks. Nortech System's Active Optical Xtreme™ (AOX™) provides new smart cable solutions for data management. AOX is a highly customizable hybrid active optical cable with embedded E-O/O-E performance. Maximize capacity for DCI, metro, long-haul, and subsea optical transport. Utilizing a geographic information platform and backed up by powerful resource management functions, it integrates cable monitoring, alarm notifications, fault. A SMART cable, or Science Monitoring And Reliable Telecommunications (SMART) cable, is a trans-ocean submarine communications cable that includes scientific instrumentation at multiple points along the cable for measuring environmental variables like temperature, pressure, or seismic acceleration.
