

# Standard height of distribution box handle

## Overview

Wall-mounted boxes should be 4. This height makes it easy to reach without bending or stretching. Ground-mounted boxes should be raised 2 to 4 inches to avoid. The proper installation of a distribution box involves placing it at the right height to ensure safety and convenience. Check for proper IP/NEMA ratings and material quality. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1. The handle of the isolator should 3 er m ab u in n r mm (minimum) in length on cable connection side as shown in the drawings. However, this height can be adjusted higher or lower appropriately for operational and maintenance convenience, provided design. The bottom of the floor mounted cabinet (box) should be 50 ~ 100 mm higher than the ground; The center height of the operating handle is generally 1. 2m in front of the cabinet (box). The protection line is connected reliably.
