

Vertical cable tray branch cables

Overview

Vertical Bends (Risers): Allow the tray to move from one elevation to another. Tees and Crosses: Create branches in the system to route cables to different areas. Reducers: Used to connect trays of different widths, often when moving from a main run (wide) to a. Characteristic of this steel type is that - prior to mechanical deformation - it is given a zinc coating by means of a continuous dipping process. This zinc coating is easily deformed. A cathodic action occurs on cut surfaces (up to 1. First, the steel is. , is a welded wire-mesh cable management system made of high-strength steel wire. Think of it as the "spinal cord" or the " elevator shaft " for your cabling infrastructure, providing a protected and structured pathway for cables to travel. Clear cable routing - Organized and safe cable management, easy maintenance, helps prevent failures. Strong and durable - Made of hot-dip galvanized steel or stainless steel, suitable for indoor and outdoor applications. Fast installation - Reduce installation costs with quick and efficient. The vertical cable ladders STL, STM and STIC meet the exact specifications and definitions of DIN 4102 Part 12 of November 1998, such as height of the cableladder / tray, width of the cable ladder/ tray, proportion of holes in the cable tray, distance between rungs of the cable ladder, material. Briticom™ Cable Trays are regularly used to manage cabling inside a data rack, the ventilated tray has an imprint profile of various size and shape openings which allows for airflow circulation around the cabling and easy fitting of different size cable straps and cable bundles.
