

What brand of optical module is WT

Overview

is a leading manufacturer specializing in research and production of fiber-coupled light sources since its establishment in 2003. Our extensive product portfolio includes semiconductor lasers, LED and SLED modules, specialty micro-lensed fibers, and integrated optical. WT&T Inc. WT&T has been developing different types of specialty laser modules meeting. WT&T have strong expertise in developing customized fiber optical components/sources/systems meeting challenging requirement such as fast modulation, power, spectral and polarization stability and output beam control. We have custom designed many variations of our products and will be happy to. An optical module is a typically hot-pluggable optical transceiver used in high-bandwidth data communications applications. Optical modules typically have an electrical interface on the side that connects to the inside of the system and an optical interface on the side that connects to the outside. This section provides a list of the top 10 Optical Module manufacturers, Website links, company profile, locations is provided for each company.
