

# What is the fiber optic terminal box in the central control room

## Overview

In short, the terminal box is the last structured node of the Fiber Optic System before service touches the subscriber. A typical PON topology (GPON, XGS-PON, or 25G PON) flows OLT → fiber distribution hub → passive splitters → distribution/drop fibers → premises. The terminal box sits at the. A Fiber Access Terminal (FAT), also known as a Fiber Access Terminal Box (ATB) or Fiber Distribution Terminal (FDT), is a key component found in optimized fiber optic access networks for FTTH implementations. It offers higher reliability and more flexible deployment and configuration than traditional terminal boxes. The fiber termination box. You'll typically find an Optical Network Terminal (ONT), or fiber box, in a central part of your home, like on the outside of your home, in your garage or even in a closet, and it plays a vital role in bringing fiber internet to your household via your internet service provider.
