

What type of fiber optic cable is used for a 40G optical module

Overview

OM5 multimode fiber optic cables have a core diameter of 50 microns, which allows them to transmit data over distances of up to 1000 meters at a speed of 40 gigabits per second (Gbps), and up to 150 meters at 100 gigabits per second (Gbps). The QSFP-40G-SR4 module supports link lengths of 100 meters and 150 meters, respectively, on laser-optimized OM3 and OM4 multimode fibers. It primarily enables high-bandwidth 40G optical links over 12-fiber parallel fiber terminated with MPO/MTP multifiber female connectors. It can also be used in. The 40G transceiver module portfolio offers customers a wide variety of high-density and low-power 40Gigabit Ethernet connectivity options for datacenter, high-performance computing networks, enterprise core and distribution layers, and service provider applications. According to different. Although alternative cabling options are mentioned (Twinax and active optical assemblies), the main focus of the document is cabling for pluggable optical Enhanced Quad Small Form-Factor Pluggable (QSFP+) modules. The OS2 designation refers to the cable's optical specifications, specifically its attenuation characteristics.
